piece, and will serve as a substitute for case hardening steel. Two melts of NIPRA steel with the following compositions (in %) were investigated: melt I - 0.55 carbon, 0.28 manganese, 0.24 silicon, 0.06 chromium, 0.12 nickel, 0.08 aluminum, 0.03 tellurium; melt II - 0.57 carbon, 0.30 manganese, 0.16 silicon, 0.03 chromium, 0.12 nickel, 0.07 aluminum, 0.04 tellurium. NIPRA steel has a small grain size and is stable against grain growth during heating in the interval 900-1100°. The mechanical properties of NIPRA steel are: for melt I - $\sigma_{0.2}$ 63.6-68.2 kg/mm², $\sigma_{0.5}$ 40.5-41.5 kg/mm², δ 19.0-21.0%, ψ 27.0-39.0%, α_K 2.9-4.2 kg/cm²; for melt II, respectively, 67.6-69.2, 41.5-41.2 kg/cm², 19.6-21.2, 37.6-42.0%, 3.4-4.2 kg/cm². V. Olenicheva.

TITLE: A device for arranging rye and wheat bread in a storage compartment with grooved inclined shelves. Class B1, No. 172232

SOURCE: Byulleten' izobreteniy i tovarnykh znakov, no. 12, 1965, 135

TOPIC TAGS: food, food product machinery, food technology

ABSTRACT: This Author Certificate presents a device for arranging rye and wheat bread in a storage compartment with grooved inclined shelves (see Fig. 1 on the Enclosure). The device consists of a mechanism for individual feeding of loaves, a lifting-lowering separator, and a chain conveyer with cradles for individual loaves. To improve its productivity and simplify its construction, a lifting-lowering separator is placed under the horizontal portion of the conveyer with cradles and is made in the form of a horizontal platform carrying (at its ends) sprockets for the horizontal portion of the conveyer and a rotary longitudinal cleat held edgewise in its original position, serving as a support for the conveyer cradles. These cradles are hinged to the links through brackets carrying rollers. To produce a more positive rotation of the cleat under the weight of the oncoming cradles loaded with loaves, at the moment of discharging

Card 1/3

L 63238-49

ACCESSION NR: AP5019109

the latter onto the grooved shelves the cleat is spring-loaded at the side of the conveyer chain. To hold the cleat in a vertical position prior to placing upon it the necessary number of cradles, knuckles are properly spaced upon the conveyer chain. These knuckles act upon the lateral face of the cleat, whose idle face bears against an immobile support. Orig. art. has: 1 diagram.

Uchenye nauki SSSR. Laboratoriya dvigatelya

Teoriya, konstruktivnyye raschet i ispytaniya dvigatelya vnutrennego sgoraniya (Theory, Design, Calculation, and Testing of Internal Combustion Motors). Moscow, Izdatvo AN SSSR, 1958. 174 p. (Series: Itogi nauki i tekhn. Seriya Fiziko-matematicheskie nauki. Vol. 1, No. 11.)

Ed. of Publishing House: V.M. Kleninikov; Tech. Ed.: E.A. Prusakov; Editorial Board: M.D. Apashev, Doctor of Technical Sciences, M.M. Zagryazhin, Candidate of Technical Sciences, Yu. B. Sviridov, Candidate of Technical Sciences, S.Z. Irtutsev, Engineer, and E.G. Yevgrafov, Engineer.

PURPOSE: This book is intended for workers of scientific research institutions, students of schools of higher education (vuzes), design bureaus, and to promote exchange of experimental information on the thermodynamics of internal combustion engines.

COVERAGE: This collection consists of 18 articles based mainly on research work done by the author in 1955-1956. Part I is devoted to working processes in gas turbine power plants and to theoretical and experimental work connected with investigation of the flow of gases. Part II contains articles on the investigation of processes in piston engines. Part III deals with the measurement of high temperatures of gases. The collection is number 4 of the Transactions of the Engine Laboratory of the Academy of Sciences, USSR. No personalities are mentioned. There are no references.

PART II. INTERNAL COMBUSTION PISTON ENGINES

79

8. Brilinskii, M.D. Corresponding Member of the USSR Academy of Sciences. Investigation of Heat Transfer in Internal Combustion Piston Engines

1) The complete investigation of heat transfer in engines makes possible the comparison of heat transferred to water in various types of engines. 2) Comparison of short strokes and normal engines shows that at the same average piston velocity the quantity of heat transferred in short strokes engines is 14-20 percent less. 3) Comparison of short strokes and long strokes engines shows that at the same r.p.m. the losses of heat in long strokes engines are less; however, in short strokes engines the average indicator pressure and the indicator efficiency are greater. 4) Taking into consideration that the short stroke is connected with an increase of r.p.m. while maintaining average piston velocity, it is possible to assume that the introduction of short stroke diesels will considerably diminish the transfer of heat to the cooling water and consequently improve engine economy. There are 2 Soviet references.

TITLE: Reaction of phosphoric acid with aluminum, iron, and lanthanum nitrates

PERIODICAL: Zhurnal neorganicheskoy khimii, v. 8, no. 3, 1963, 617-621

TEXT: This reaction was studied thermographically and by x-ray phase analysis. In general, the reaction of phosphoric acid with aluminum and iron nitrates can be expressed by the equation proposed earlier (patent FRG 1018850):

When the ratio of the reacting components is 1:1, the nitrates decompose at 130°C, and tertiary metal phosphates form. The nitric acid evaporates at nearly constant temperature, which suggests the formation of a saturated solution, just as in the reaction of calcium nitrate with phosphoric acid and monocalcium phosphate. The thermogram for $\text{La}(\text{NO}_3)_3 \cdot 6\text{H}_2\text{O}$ showed a melting point at 65°C, crystallization and complete

Card 1/2

Reaction of phosphoric acid with ...

S/073/63/008/003/005/020
B117/B186

dehydrogenation at 210°C, and decomposition at 380-410°C. Decomposition of lanthanum nitrate mixed with phosphoric acid in a 1:1 ratio proceeds similarly to that of the two first-mentioned nitrates, but at a lower temperature (122°C). X-ray phase analysis showed the presence of tertiary lanthanum phosphate in the solid phase. The experimental results agreed well with the thermodynamic values calculated for the decomposition of aluminum and iron nitrates in phosphoric acid. There are 7 figures and 2 tables.

TITLE: Synthesis of esters of O, O-dialkylphosphoric and O, O-dialkylthiophosphoric acids and pentachlorophenol
1.44

SOURCE: Zhurnal obshchey khimii, v. 35, no. 2, 1965, 352-354

TOPIC TAGS: organic synthetic process, ester, insecticide, phenol, condensation reaction, acetone, bactericide, phosphate

ABSTRACT: At present, numerous insecticides of the class of esters of O, O-dialkylphosphoric and O-dialkylthiophosphoric acids are known. Different substituted phenols have been used as the alcoholic component of such esters. Continuing studies in this area, the synthesis of esters of O, O-dialkylphosphoric and O, O-dialkylthiophosphoric acids and pentachlorophenol was attempted. The authors attempted to obtain compounds with insecticidal bactericidal properties. O, O-Dimethyl- and O, O-diethylpentachlorophosphates were obtained by condensation of corresponding O, O-dialkylchlorophosphates with pentachlorophenol in boiling acetone in the presence of Na_2CO_3 with a 60-65% yield. Biological tests showed that the synthesized compounds had average insecticidal and weak bacteriostatic properties.

TITLE: Relations Among the Granitoidal Rocks in the Lower
Course of the Kaa-Khem River (Eastern Tuva) / 0 sootno-
sheniï mezhdû granitoidami nizhnego techeniya r. Kaa-
Khem (Vostochnaya Tuva) 7

PERIODICAL: Tr. Vses. aerogeol. tresta, 1956, Nr 2, pp 88-93

ABSTRACT: In the region of the village of Znamenka, along the
lower course of the Kaa-Khem River (Malyy Yenisey), the
oldest rocks are Lower Cambrian and intensely deformed.
They are greenstone porphyrites, quartz-plagioclase
porphyries, marmorized limestones and, in subordinate
amounts, quartzites. Lower Devonian (?) effusive-tuf-
faceous beds lie unconformably on this sequence and are
presumably by Middle Devonian clastic red beds. The
intrusive rocks of the region form two groups: 1)
granodiorites, quartz diorites, diorites, gabbros, and

Card 1/3

15-1957-10-13904

Relations Among the Granitoidal Rocks in the Lower Course of the Kaa-Khem River

pyroxenites; and 2) granites (pink), granite porphyries, and granodiorite porphyries. Granodiorites and quartz diorites are the most abundant of the first group; tonalite-type rocks are distinguished among the quartz diorites (high biotite and hornblende content). All the rocks in the first group are related by gradual transitions and show local alternations of one variety with another. The gabbro-norites, which are typical hybrid rocks, form schlieren segregations in the diorites and gabbro-diorites, and commonly occur at contacts with limestones and effusives of basic and intermediate compositions. The group as a whole corresponds to the "Tannuol'skiy" complex of V. A. Kuznetsov and G. V. Pinus (Dokl. AN SSSR, vol 65, Nr 1, 1949) or the "Argolikskiy" complex of L. N. Leont'yev (Dokl. AN SSSR, vol 91, Nr 5, 1953); the author proposes the preservation of term "Tannuol'skiy." Pink granitoidal rocks with both abyssal and hypabyssal features form the second group: granites, granite porphyries, and granodiorite porphyries. The abyssal varieties generally occur in the central parts of the masses, the hypa-

Relations Among the Granitoidal Rocks in the Lower Course of the Kaa-Khem River

byssal about the peripheries. The author compares these rocks, in age relations and in composition, with the "Late Caledonian" complex of V. A. Kuznetsov and G. V. Pinus. In both, intrusions of different ages are characterized by the following features: 1) young granites form small bodies, commonly where Lower Devonian rocks occur; 2) the structural pattern of the masses, which the rocks of the first group share with their host rocks, is in contrast with the structureless masses of the rocks of the second group; 3) the many varieties in the first group, produced by assimilation and hybridization, also contrast with the relatively homogeneous composition of the second group; 4) there is a difference in the intensity of endogene and exogene changes; and 5) in the group of pink granites the alkali content is high and the amount of CaO , Al_2O_3 , Fe_2O_3 , FeO , and MgO is low.

TITLE: Chronicle. Activities of the Geological Sections of the Moscow Naturalist Society, Petrographical Section (Khronika. O deyatel'nosti geologicheskikh sektsiy Moskovskogo obshchestva ispytateley prirody, Petrograficheskaya sektsiya)

PERIODICAL: Byulleten' Moskovskogo obshchestva ispytateley prirody, Otdel geologicheskiiy, 1958, Nr 3, pp 135-137 (USSR)

ABSTRACT: On 6 February 1958, at a meeting under the chairmanship of Ye.A. Kuznetsov (secretary T.L. Nikol'skaya), Ya.D. Shenkman lectured "Several Paleozoic Intrusions of Eastern Tuva". On February 13, 1958, Ye.A. Kuznetsov gave a review of foreign literature pertaining to petrography. Questions on the submitted themes were asked by: Ya.D. Shenkman, Ye.K. Markhinin, and T.M. Dembo. A.M. Daminova lectured on the importance of the study of field spar in petrographical work. On February 20, a manual by Ye.A. Kuznetsov, entitled "Petrography of Magmatic and Metamorphic Rocks", was discussed by the following geologists: S.D. Chetverikov, V.I. Chernov, T.L. Nikol'skaya, V.S. Koptev-Dvornikov and T.M. Dembo. On February 27 E.I. Tikhomirova, on behalf of collective authors L.I. Blokhina, V.K. Zaravyayeva, I.S. Krasivskaya, M.A. Petrova, E.I. Tikhomirova, and Ye.B. Yakovleva, lectured on

"The problem of Classification of Clastic Volcanogene and Tuffogene-Sedimentary Rocks". Questions pertaining this subject were asked by the following geologists: S.K. Onikiyenko, Ye.K. Markhinin, O.M. Kanfel', A.D. Rakcheyev, T.I. Frolova, A.M. Daminova, T.Ya. Goncharova, M.N. Shcherbakova, Afonin, G.B. Rudnik. On March 6, 1958, Ye.K. Markhinin lectured on "The History of Volcanism on the Kunashir Island", which was discussed by: S.K. Onikiyenko, T.M. Dembo, A.D. Rakcheyev, V.S. Koptev-Dvornikov, V.N. Pavlinov, Ye.A. Kuznetsov. Ye.N. Odintsova, Doktorant of the Institut Biokhimii AN SSSR (Biochemical Institute AS USSR), drew attention to the fact that plants of this region had an extremely high content of sugar. Following the suggestion made by T.M. Dembo to discuss the question of indexes of mountain rocks in geologic mapping at the VSEGEI, it was moved to delegate V.Ye. Gendler to take up this problem with MGRI, MITSMIZ and VAGT. On March 13, 1958, O.S. Polkovy delivered a lecture on "Petrographic Features of Multi-Colored Devonian Massifs in the Betpak-Dala Desert". The

following geologists participated at the discussion: M.A. Dmitriyev, A.D. Rakcheyev, Ye.K. Markhinin, V.I. Chernov, A.M. Daminova, T.L. Nikol'skaya, V.Ye. Gendler, V.I. Chernov, T.M. Dembo, Ye.A. Kuznetsov and V.S. Koptev-Dvornikov. On March 20, 1958, M.G. Lomize lectured on "New Data on Jurassic Volcanism of the North-Western Caucasus". Questions pertaining to this report were asked by: Ye.B. Yakovleva, Ye.Ye. Milanovskiy, A.D. Rakcheyev, V.S. Koptev-Dvornikov. On March 27, 1958, N.A. Sirin lectured on "Recent Magmatism of the Urals". On the discussion that followed, questions were asked by the following geologists: T.L. Nikol'skaya, A.D. Rakcheyev, V.N. Gavrilova, Ye.K. Markhinin, and Ye.A. Kuznetsov.

TITLE: Several Paleozoic Intrusions of the Eastern Tuva (O nekotorykh paleozoyskikh intruziyakh vostochnoy Tuvy)

PERIODICAL: Byulleten' Moskovskogo obshchestva ispytateley prirody, Otdel geologicheskii, 1958, Nr 3, pp 144-145 (USSR)

ABSTRACT: Among the intrusions of Eastern Tuva, the Lower Paleozoic Pre-Ordovician, Pre-Silurian and Lower Devonian intrusions predominate. The author gives a brief description of the distribution, the petrographical structure, and the mineral composition of intrusive rock formations in this region.

2779. Polarographic determination of concentration of weak acids.
 1. A. Korshunov, Z. B. Kuznetsova, and M. K. Schennikova (*J. anal. Chem., USSR*, 1951, 6, 98-100).—With most weak acids a 15- to 20-fold increase in concn. shifts the half-wave potential towards more negative values by 10–15 mv., but with succinic acid (E_1 –1.80 v. versus the saturated calomel electrode) no change occurs with concn. In neutral Li or K salts, and in tetramethylammonium iodide, the H^+ diffusion current occurs between –1.6 and –1.8 v. for most org. acids, and it is \propto concn. ($>10^{-3}$ to $10^{-4}M$). If the first diffusion const. is $<10^{-4}$ no H^+ diffusion current occurs. Results for a no. of weak acids show that if K_a is the diffusion current const. (diffusion current in μ amp./acid concn. in millimol. per l.) and pK is the negative logarithm of the first dissociation const. of the acid, then $K_a = 5.25 - 0.725pK$. G. S. SMITH.

Kazan', Izvestiya VUZ - Matematika (Herald of the Higher Educational Institutions - Mathematics), No 4 (53), 1966, pp 150-152

Abstract: A triangular matrix of interpolation points as well as an interpolation polynomial for the function $f(x)$ are given in the segment $[-1, 1]$. It is shown that the interpolation process $L_n(f_n, x)$ converges uniformly to the function $f(x)$ in the segment $[-1, 1]$. Another triangular matrix is given for which a sequence of polynomials converges uniformly to the function $f(x)$ in the segment $[-1, 1]$. Orig. art. has: 8 formulas. [JPRS: 38,417]

International Conference on the Peaceful Use of Atomic Energy. 2nd, Geneva, 1958

Dobryi sovetskikh uchebnykh yadernykh korpusov i reaktorov metall. (Reports of Soviet Scientists), Nuclear Fuel and Reactor Metals) Moscow, Akademiya, 1959. 670 p. (Series: Tea: Study, vol. 5. 6,000 copies printed.

Ed. (title page): A.A. Kocher, Academician, A.P. Vinogradov, Academician, V.M. Yemel'yanov, Corresponding Member, USSR Academy of Sciences, and A.P. Leifinov, Doctor of Technical Sciences; Ed. (inside book): V.V. Parvutsev and G.M. Povolitskiy; Tech. Ed.: E.I. Masel'.

PURPOSE: This volume is intended for scientists, engineers, physicians, and biologists working in the production and peaceful application of atomic energy; for professors and higher technical education where the subject is taught; and for people interested in atomic energy and technology.

COVERAGE: This is volume 1 of a 6-volume set of reports on atomic energy, presented by Soviet scientists at the Second International Conference on the Peaceful Use of Atomic Energy, held in Geneva from September 1 to 13, 1958. Volume 1 consists of two parts. The first part, edited by A.I. Zubov, is devoted to geology, prospecting, concentration and processing of nuclear source material. The second part, edited by G.L. Zverev, includes reports on metallurgy, metallography, processing technology of nuclear fuels, reactor metals, and neutron irradiation effects on metals. The titles of the individual papers in most cases correspond word for word with those in the official English language edition on the Conference proceedings. See 809/2061 for the titles of the other volumes of the set.

TITLE: Driving V-Belts (Privodnyye klinovyye remni)

PERIODICAL: Standartizatsiya, 1958, # 1, pp 45-46 (USSR)

ABSTRACT: The article gives detailed information on the new "GOST 1284-57"-standard for V-belts, which will be in force from 1 October 1958, and replaces the "GOST 1284-45". The V-belt dimensions, as well as the dimensions, materials and machining methods for the pulleys, are chosen in accordance with ISO/TC 41 recommendations. The length gradations of belts correspond to the series R40 of the preference numbers series system. The belt tension, 12 kg/cm² for belts working on small diameter pulleys, and 15 kg/cm², for belts working on large pulleys, has been made the standard, as a result of investigations made by the Scientific Research Institute of the Rubber Industry, as well as in accordance with ISO/TC 41 recommendations and the latest foreign standards.
